19 January 2018

Dear Chief Executive

## STRUCTURAL DESIGN OF CLADDING SYSTEMS

The advice and guidance within that letter on what actions building owners should consider and undertake remains current. A number of building owners have however since sought further information on whether it is possible to assess what buildings are most likely to fall within the scope of the guidance. Due to the possible effect of any deficiencies, high rise buildings in exposed locations will be at a higher risk than low rise buildings in sheltered locations and it is reasonable that building owners should focus their attention on these buildings first.

The letter of 9 November asked that local authorities consider circulating this advice to other relevant building owners in their area. In order to help identify initial relevant buildings, I would ask you to check your building warrants for any buildings in your area that have been constructed with external wall insulation systems with a rendered (or brick slip) finish at any time, or those that have been retrofitted with these systems within the last 15 years, and advise the relevant building owners accordingly
